

Tomer Cohen

Full-Stack Software Engineer

Phone: 054-321-0990 | Email: tomernado1233@gmail.com | [GitHub](#) | [LinkedIn](#)

Professional Summary

Software Engineer with proven experience architecting complex OOP systems and secure, full-stack web applications. As a 3rd-year Computer Science student, combines a strong focus on algorithmic efficiency and system complexity, with the ability to leverage AI tools for accelerated development.

Backed by a background in operations management, combining positive energy and teamwork to deliver solutions under pressure.

Technical Skills

- **Languages:** C#, Java, JavaScript, Python, SQL, C, C++.
- **Architecture & Security:** Object-Oriented Programming (OOP), Design Patterns (e.g., Singleton, Observer, Factory), S-SDLC, JWT, bcrypt, RESTful API Design, MVC, Clean Code principles.
- **Frontend, Backend & UI:** React.js, Material UI (MUI), Node.js, Express, axios, Tomcat, Jakarta Servlets, HTML, CSS, WinForms.
- **Databases & Data Science:** MySQL, NoSQL, MongoDB, Pandas, NumPy, Scikit-Learn.
- **Tools & Environments:** VS Code, Linux, IntelliJ, WebStorm, GitHub, Vite, Postman, Jupyter Notebook, AI Coding Tools.

Self Projects

Secure Customer Management System (S-SDLC) | React, Node.js, Express, MySQL, MUI

- Developed a secure web app for personalized customer management, applying S-SDLC methods to mitigate OWASP vulnerabilities.
- Implemented strong authentication (JWT, httpOnly Cookies) and password encryption (bcrypt + Salt) and Rate Limiting mechanisms.
- Secured databases and client interfaces by preventing SQL Injection and Stored XSS.

Advanced OOP & Architecture Portfolio | C#, .NET, OOP

- System Design: Engineered complex C# OOP systems (Garage Management, Game Engine), applying Design Patterns, Clean Code, and core principles (Inheritance, Polymorphism, Composition).
- Event-Driven Architecture: Architected WinForms applications utilizing Delegates and Events to achieve strict decoupling between business logic and the UI.

Multiplayer Client-Server Game (Connect 4) | Java, OOP, Servlets, Tomcat, JavaFX, Postman

- Developed an end-to-end Client-Server network game, deeply applying OOP principles to architect scalable game entities.
- Engineered the backend using Java Servlets and Tomcat for data synchronization session management, and HTTP req-res.
- Designed a decoupled desktop UI via JavaFX and Scene Builder, and rigorously tested backend API endpoints using Postman.

Real-World Web Projects & Algorithmic Portfolio | React, JS, HTML/CSS, AI Tools

- Web & AI Integration: Engineered and deployed 3 live client websites (managing domains & SSL), transitioning from manual HTML/CSS coding to AI-accelerated React development by using core skills to prompt, debug, and refactor code for production.
- Interactive Portfolio & Game Logic: Developed tornadogames.lovable.app as a central hub for personal coding challenges, showcasing targeted learning projects including a React-based Blackjack, a Java Tic-Tac-Toe, and a C# smart Connect 4.

Work Experience

Creative Strategist & Marketing | Freelance | 2023 - Present

- Produced successful, creative digital content and commercials for various businesses. Managed the complete video production process from understanding client concepts and planning the videos, to final execution and delivery.

Operations & Team Management | 2021 – 2023

- Managed daily restaurant operations and shifts in high pressure environments, including staff scheduling, recruitment, overseeing inventory, supply chain management and real-time crisis resolution.

Education

- B.Sc. in Computer Science | Holon Institute of Technology (HIT) | 3rd Year
- Certificate Coursework: Java OOP - Jakarta Servlets, Apache Tomcat.
